

## System Flush for HVAC & Refrigeration Equipment

Standard 7/16<sup>th</sup> threaded connection with a self-sealing valve for multiple uses.

Each can contains 16.9 Fl ounces of our flushing material. Our flush evaporates quickly, is non-flammable, and is pressurized with 300 PSI of nitrogen to evenly dispense the entire contents of the can deep into the system or line set.

- Each can will flush up to a 4-ton system or up to 2 line sets depending on the equipment/ line layout.
- When flushing line sets with can pressure, flush from highest point.
- For all other scenarios, chase the flush material with 150 psig of nitrogen until all contaminants and flush material has passed through the lines.
- Once flushing is complete and the equipment has been repaired, ensure you pull a full vacuum in the system to boil off any remaining flush.

Product Name	UPC	Product Number	Qty Sold In
Pro Charge System Flush	850008474309	4309	Each
Pro Charge Flush Hose	850008474521	4521	Each
